# AN IDEAL PROTEIN FOR PET FOODS AND TREATS

## THE BEST OF MEAT- AND PLANT-BASED PROTEINS IN ONE ALTERNATIVE PROTEIN.

Versity™ is a high-quality protein with a profile of essential amino acids that make it an ideal pet food ingredient. Versity has an amino acid profile that's similar to egg and at a price that's more economical. It's a smart alternative to animal proteins with more label appeal than plant-based sources like corn, wheat and soy. Versity is the ideal niche protein product for adding a consistent supply of quality protein when animal- or plant-based proteins won't suffice.

## VERSITY. VERSATILITY MEETS FLEXIBILITY.

Versity is a complex protein composed of *Saccharomyces* yeast. It is a more affordable option than many common protein sources used in pet food formulations. The consistent nutrient profile and quality of Versity, along with its inherently low levels of fat and ash, make it ideal for multiple pet food and treat applications. Most of all, Versity meets your need for a cost-effective, complementary protein source for dogs and cats.

## PROVEN ACCEPTABILITY AND DIGESTIBILITY.

Formulated specifically for pets, Versity is an excellent source of digestible amino acids and has no known anti-nutritional properties. This allows for efficient absorption and utilization by dogs and cats alike. In fact, recent studies demonstrate the feeding value of Versity for dogs and cats.
