

**entosystem**

Unleashing the superpowers of insects in a cleaner, more sustainable and responsible food system.

At **Entosystem**, we dream of a world that is inspired by nature. This is why we use cutting edge insect farming technology to place **circular economy** at the heart of our business model.

While the majority of the food production in Canada is wasted, the exceptional natural abilities of our **Black Soldier Fly Larvae (BSFL)** allow us to upcycle a massive quantity of this organic matter, every day.

After thriving on this type of organic waste, we will harvest them, dry them, and then press them into a highly digestible protein meal while extracting an oil rich in lauric acid. Both meal and oil are premium ingredients that can be used by pet food, feed and aquaculture manufacturers. What is left behind is a larvae manure that is sold as an excellent fertilizer approved for organic farming.

Pioneering with agility and purpose, **Entosystem** is a major leader in the field of **agricultural circular economy**.

# HIGH-QUALITY BLACK SOLDIER FLY PROTEIN

The alternative source of nutrients for the pets who want to reduce their impact on the planet.

TOGETHER, LET'S REDUCE OUR CARBON PAWPRINT

## OUR 100% NATURAL PRODUCTS FROM OUR CIRCULAR ECONOMY PROCESS

Our golden dried larvae are naturally rich in proteins, lipids, soluble fibers and calcium. They can also add a crunchy twist in your pet treats.

Our Ento-protein is a good alternative to conventional proteins for dog and cat food: it's a new option in your hypoallergenic formulation strategy.

Our Ento-oil has a lipid profile similar to coconut oil and is loaded with lauric acid, a fatty acid well known for its antimicrobial properties.
